RETAIL PRICE LIST ON GARDEN SEEDS FOR 1929

We aim to carry in stock at all times all standard varieties of Garden Seeds, also a full line of Field Seeds. Our Motto is not lowest prices, but quality, such as will give complete satisfaction. At the same time we establish our prices as we believe to be only a fair per cent of profit on our investment and only such as we are entitled to. Furthermore, we aim to give prompt service to all of our customers.

INTRODUCTION

In presenting this revised edition of our Garden Catalogue we wish to thank our customers for their liberal past patronage and take pleasure in soliciting your further orders.

PERSONAL GREETING

Dear Friend and Customer:

We want to begin with a word of acknowledgement and appreciation. We thank you for your splendid patronage of the past year. We added a lot of new customers, and if you keep on telling your neighbors of your confidence in us and in our seeds we will add a lot more. We shall strive harder than ever during the coming year to merit your confidence and will do our best to give you good service as well as good seeds.

It has always been our policy to base prices on a High Standard of Quality and the following list we believe represents a fair market value for seeds of this type. We are therefore glad at all times to meet prices from reliable competition upon a Quality basis. We are firmly convinced that the strains which we offer are the best suited to the most critical trade, being at all times the best that we can buy or grow.

Plant Feeding

Everyone realizes that a plant is a living object yet very few people understand how it breathes, feeds, grows, and reproduces.

Essential to maintain plant life are light, heat, air, moisture and plantfood. Of these, plantfood is possibly the only factor over which we can exercise much control.

Most failures in plant growing can be attributed to the lack of proper plantfood. It is just as necessary to supply our plants with the right plantfood as it is to feed ourselves properly.

The soils in towns and cities are usually quite deficient in plantfood. Either nature failed to deposit a good supply originally, or the plantfood once stored in the soil has been consumed by the plants grown year after year.

A sure sign of plant starvation is evidenced by a sparse growth of grass, lacking a rich green color; vegetables that are slow to reach maturity, lacking crispness and flavor; flowers with spindling stalks and poorly developed blossoms; trees and shrubbery with yellowish or undersized leaves, dying branches and short twig growth.

BAYER DUST for CORN

Increases the Yield

Now you can disinfect your seed corn before you plant it—and so help to prevent seedling blight, root rot and other diseases that cause losses of millions of dollars to corn growers annually.

BAYER Seed Corn Treatment permits earlier planting and tends to reduce seed decay; increase germination; prevent seedling blight, root and stalk rots; reduce the amount of "down" corn and increase the yield.

No special equipment is needed for this new seed treatment. No tiresome or lengthy procedure is involved. And the cost is less than 5c per acre.

1 pound treats 6 bushels of corn

THE EASY WAY TOWARD RICHER SOIL AND LARGER AND BETTER CROPS

Make legume crops into soil builders. Alfalfa, clovers, peas, beans, soybeans and vetches (all pod bearing plants) grow better and also enrich the soil, when they are inoculated. Such legumes have nodules on their roots. These nodules extract nitrogen from the air. Plants without nodules cannot do this. **McQUEEN'S INOCULATOR** produces nodules on legume roots.
